Value The team at Snap Medical Industries spent two years researching and vetting ideas for our epinephrine products based on clinical experience and use of epinephrine in anaphylaxis. We are a licensed manufacturer of epinephrine convenience kits with the boards of pharmacy nationwide. Our products are registered with the FDA and we retain FDA experts to lead our Quality Management System. These steps provide assurances that EpinephrineSnap® kits are manufactured under the highest standards available worldwide.

Choice EpinephrineSnap® kits are an alternative for healthcare providers, to high cost and largely unavailable epinephrine auto-injectors.

Indication for Use EpinephrineSnap® can be used to treat anaphylaxis in people weighing equal to or greater than 15 kg or 33 lbs. The size of an average 2 year old according to CDC published growth charts.

Product and Packaging EpinephrineSnap® kits include FDA approved epinephrine (vial) USP 1:1000 1 mg/ mL with 1 mL total volume. Our packaging is sturdy and provides no chance of light to penetrate, protecting the effectiveness of the epinephrine.

Safety Needles We provide 23 gauge 1 inch safety needles, assuring an easy, quick fill from the vial. The needle size is appropriate for a pediatric, teen or adult intra-muscular injection into the vastus lateralis muscle, the preferred injection site.

The Epinephrine Syringe™ Our syringe is an FDA approved 1 mL syringe that now has markings for common epinephrine dosing of 0.15 mg or 0.15 mL, 0.3 mg or 0.3 mL, and 0.5 mg or 0.5 mL. Always follow your prescribed order when determining epinephrine dosing and if this product will meet your protocol for treating anaphylaxis. Our syringes have a luer lock tip. This is a critical factor as the locking action of the needle to the syringe allows the health provider to confidently administer lifesaving epinephrine in the field, even thru clothing, and never worry about the needle “slipping”.

Instruction for Use Our kits are labeled clearly and provide the necessary information to treat anaphylaxis. Our Instructions for Use have gone thru a vigorous quality review and serve as both instructions and a reference for providers.

Training and Demonstration Kits Contact us at snapmedicalindustries.com to obtain a kit for clinical review.
